

Demo Script — T&E Audit Agent

Trigger a run (or let the schedule fire): the agent queries BigQuery for recent expense reports, joins them against the violation view, has the LLM read the relevant country policy and write a finding + severity for each flag, and compiles the results into the audit_findings table / review digest. The demo lands best when the sample data contains a spread of violations (over-limit, duplicate, out-of-policy category, weekend/personal-date, approval-authority breach) so leadership sees both the deterministic catches and the LLM's judgment calls.

FORMAL SUMMARY REPORT: INTERNAL AUDIT TEAM

Executive Summary

A comprehensive compliance audit was conducted across the Q3 FY26 Travel & Expense dataset. Fifty-seven (57) individual transactions totaling \$14,570.67 across 16 submitted expense reports were cross-referenced against Sanmina's 30-Point T&E Monitor Check Library and Global Travel Policy.

The audit established that 38 transactions (\$7,639.11) complied with established standards, while 19 transactions (\$6,931.56, representing 47.6% of audited spend) breached policy controls, exhibited high-risk fraud indicators, or displayed severe workflow anomalies.

Top 3 Most Critical Compliance & Fraud Risks

1. Unapproved First/Business Class Airfare & Retroactive Report Splitting (\$1,473.83)

Involved Employee: Nathanael William Woolsey (ID: 1047) | Report 311810

Finding: A charge of \$1,473.83 was submitted for a 1-hour intrastate flight (San Jose to Orange County/Costa Mesa), exceeding normal coach rates (\$360-\$590) by more than \$900 without executive pre-approval (Check #19). Furthermore, this flight was omitted from Woolsey's original Costa Mesa trip report (311690) and retroactively expensed on a separate report filed at month-end.

2. Cross-Departmental Approval Hierarchy Bypass (Check #22)

Involved Employee: Zeljko Sola (ID: 1749) | Report 309500 (\$296.39)

Approving BI Manager: Daniel Lee Dawiedczyk (Manager, Dept 5510)

Finding: Zeljko Sola is an operational sales employee in Department 7560 under Stephen Bray. His expense report was routed to and approved laterally by Daniel Lee Dawiedczyk, head of Department 5510 (General & Occupancy). This bypasses supervisory oversight and violates fundamental segregation of duties.

3. Systematic Threshold Avoidance & Pre-Dated "Open Envelope" Reporting

Involved Employee: Jaime Mendoza (ID: 450093) | Reports 308336 & 310974 (\$588.05 total)

Finding: Six consecutive gasoline transactions were structured either exactly at \$100.00 or immediately below (\$99.40, \$97.71, \$97.65, \$93.39), evading receipt documentation and manager escalation thresholds (Checks #2 and #4). Additionally, both reports were pre-dated by up to 46-58 days before transactions occurred, exploiting expense software as open running tabs.

3. Actionable Remediation Recommendations

Priority	Focus Area	Required Action	Responsible Party	Timeline
P1	Airfare Fare Differential Clawback	Issue formal clawback or demand executive authorization for Nathanael Woolsey's \$1,473.83 airfare; recover the ~\$950 fare premium over standard coach.	Payroll / Internal Audit	Immediate (7 Days)
P1	Approval Rerouting & Re-Audit	Nullify Daniel Dawiedczyk's lateral approval of Report 309500; route Zeljko Sola's expenses to Stephen Bray (Dept 7560) for legitimate review.	Concur Admin / AP Team	Immediate (48 Hours)
P2	Fuel Reimbursement Suspension & Commute Audit	Suspend unverified fuel reimbursements for Jaime Mendoza; require submission of detailed odometer trip logs to separate commuting from business miles.	HR / Operations Mgmt	Immediate
P2	Meal Documentation Hold	Place an administrative hold on reimbursement releases for undocumented group meals (\$575.31, \$344.79, \$300.79, \$224.58) until external attendee rosters are provided.	Accounts Payable	5 Days
P3	Software Workflow Hardening	Implement automated Concur validation rules blocking report submission when report header creation dates precede transaction dates.	IT Finance Systems	Next Release Cycle
